Product Discontinuation Notification for 170E w/ 6802 Controllers

This letter serves as a formal notification to inform you the discontinuation of the 170E controller with Motorola 6802 processor chips. This is specifically due to the availability of the processors on the open market.

The effective timeframe is expected by the end of 2019 as McCain does have a limited supply of the 6802 processors. We will accept orders on a “first come, first serve” basis and will be confirmed based on in-house availability of the processors.

McCain appreciates and values your partnership. While we regret any inconvenience this announcement may cause, we are eager to provide you with other “drop-in” enhanced product replacements to help with this transition.

- 2070E Caltrans TEES 2009
- 2070LX Advance Transportation Controllers
- FLeX Advance Transportation Controllers

Please be assured that we will do our best to make this migration as smooth as possible for you, so please contact your local McCain representative to discuss your options and any questions you may have.

Sincerely,

Nathan Welch
Director of Sales
McCain, Inc.
